

# Annual Report 2018

For years, we've stood together to fight the tide of rollbacks pushed by the anti-environmental NC General Assembly. In 2018, our work helped to begin to turn the tide, resulting in positive steps for NC's environment, including:

1. Governor Cooper signing Executive Order 80 to begin to address climate change.
2. Decisive action to require Duke Energy to clean up all their coal ash pits in NC.
3. New rules to begin to address industrial hog waste.
4. The creation of the NC Environmental Justice and Equity Board.

While much work remains, we're excited to see progress and work alongside you to begin rebuilding our environmental and public health protections.
